

**AMENDMENT TO THE DRAWINGS**

Please replace drawing sheet containing Figures 3 and 4 in the application as filed with the attached replacement drawing sheet for Figures 3 and 4. The replacement sheet contains no new matter.

**REMARKS**

It has come to applicants' attention that the figures as published with the underlying PCT application (PCT/GB2005/000769) contain an error. When the formal drawings were prepared and forwarded to the Receiving Office, an error was introduced into Figure 4.

Figure 4 should show bacterial contamination of a contact lens for (i) control and (ii) peptide treated contact lenses. Figure 4 as originally filed is correct, because the control contact lens (labelled (i)) shows significant contamination with bacteria (dark slide) whereas the treated contact lens (labelled (ii)) shows negligible contamination (lighter slide).

It appears that the two photographs were inverted when the formal drawings were prepared. It is these formal drawings which have been published (WO2005/082399), so it appears that the treated lens shows greater bacterial contamination. This was not intended.

It should immediately be apparent to one skilled in the art that the correct Figure 4 is that as originally filed, not that as published, as it would be obvious that the applicants are not trying to illustrate that the peptides cause greater contamination.

Applicants respectfully request that correction of Figure 4 as set forth on the replacement sheet be entered prior to prosecution and/or publication of this application. The drawings contain no new matter.

Respectfully submitted,

Dobson *et al.*
